AI23421 - Internship

Web Development
at
Altruisty Innovation Pvt Ltd

Submitted By
SIVASANKARI B
2116241501205
2025-26

In partial fulfilment of the award degree of
BACHELOR OF TECHNOLOGY
in
ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

MARCH 2026

RAJALAKSHMI ENGINEERING COLLEGE

(An Autonomous Institution Affiliated to Anna University, Chennai)

Bonafide Certificate

This is to certify that Ms. Sivasankari B (Register Number: 2116241501205), Department of Artificial Intelligence and Machine Learning, Rajalakshmi Engineering College, has successfully completed the internship titled “Web Development” at Altruisty Innovation for a duration of 15 days from 15.12.2025 to 30.12.2025 during the academic year 2025-2026, as a part of the academic curriculum requirement. This internship record is submitted in partial fulfillment of the requirements for the award of the degree of Bachelor of Technology in Artificial Intelligence and Machine Learning.

DR.K. SEKAR

HEAD OF THE DEPARTMENT

DR.K.R. SOWMIA

Submitted to internship viva - voce examination held on _____

INTERNAL EXAMINER

EXTERNAL EXAMINER

DECLARATION

I hereby declare that the internship report titled “Web Development” submitted by me is a genuine record of the work carried out by me during the internship period at Altruisty Innovation.

I affirm that the work presented in this report is original and has been completed as part of the academic requirements of Rajalakshmi Engineering College for the academic year 2025-2026. All the information and findings included in this report are true to the best of my knowledge.

The internship work was carried out under the guidance of my faculty mentor and industry supervisors, and this report reflects my learning and practical experience gained during the internship.

Signature:

Name:

Register Number:

Date:

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to the management of Rajalakshmi Engineering College for providing me with the opportunity to undergo this internship as part of the academic curriculum.

I extend my heartfelt thanks to our Chairman, **Mr. S. Meganathan**, and Chairperson, **Dr. (Mrs.) Thangam Meganathan**, for providing excellent infrastructure and a supportive academic environment that encourages practical learning and industry exposure.

I am deeply thankful to our Principal, **Dr. S.N. Murugesan**, for his constant encouragement and motivation to explore real-world applications of technology. I would also like to thank our Head of the Department, **Dr. K. Sekar**, for his valuable guidance and support throughout the internship period.

We express our sincere gratitude to our Academic Head, **Dr. K. R. Sowmia**, for her valuable guidance and continuous support throughout the internship. We also extend our heartfelt thanks to our mentors, **Mrs. J. Jasmine Gabriel** and **Mrs. K. Sangeetha** for their encouragement, technical guidance, and support during the successful completion of this internship.

I would also like to extend my gratitude to the team at Altruisty Innovation for providing me with the opportunity to work on Web Development projects. Their mentorship, technical guidance, and professional support during the 15-days internship helped me gain practical exposure to industry-standard tools, technologies, and workflows.

Finally, I thank all those who directly or indirectly supported me in completing this internship and report successfully.

INTRODUCTION

About Internship:

The 15-days internship at Altruisty Innovation provided comprehensive training in Web Development, offering practical exposure to real-world software development practices. It enabled hands-on experience in frontend development, backend development and database management. This practical training environment helped in understanding industry workflows, collaborative development, and deployment processes.

Importance of Internship:

Internships are essential in connecting academic knowledge with industry expectations. While classroom learning focuses on theoretical concepts, internships provide an opportunity to apply those concepts in real-time scenarios. This internship enhanced problem-solving abilities, gave insights into the software development lifecycle, and introduced professional coding standards followed in the industry.

Purpose of Internship:

The primary purpose of this internship was to gain in-depth knowledge of the end-to-end web development process. It aimed to develop the ability to design and implement a complete web application using technologies such as React.js, Angular. The internship also aimed to improve technical proficiency, team collaboration, and project management skills.

Scope of Work:

The scope of work included multiple layers of application development such as User Interface (UI) design, REST API development and database schema design. Responsibilities also involved testing, debugging, and performance optimization to ensure application reliability. The internship covered the complete software development lifecycle, from requirement analysis to deployment and validation.

COMPANY PROFILE

Altruisty Innovation Pvt. Ltd. is a professionally managed company that focuses on providing innovative solutions and quality services in its field. The company is committed to excellence, continuous improvement, and professional growth. It provides a positive working environment that encourages learning, teamwork, creativity, and technical development.

The company also offers valuable internship opportunities for students to gain practical exposure and industry experience. Through such programs, Altruisty Innovation Pvt. Ltd. helps interns understand real-time work culture, improve their skills, and apply their academic knowledge in practical situations. Thus, the company serves as a useful platform for both professional learning and career development.

Vision & Mission

Vision

- To become a leading platform in delivering industry-ready technical training and internship opportunities, empowering students with the skills required for the modern workforce.

Mission

- To provide high-quality practical training programs and hands-on internship experience
- To enhance technical competency and employability
- To support students in building strong professional careers

Services / Products

Altruisty Innovation offers:

- Full Stack Web Development Training
- Programming Courses
- Live Mentor-Led Sessions
- Project-Based Internships
- Certification and Recommendation Letters
- Career Guidance and Interview Preparation

Client Base

Altruisty Innovation primarily serves:

- Undergraduate and postgraduate students
- Aspiring software developers
- Fresh graduates seeking industry exposure
- Individuals looking to upskill in technical domains

Achievements

- Successfully trained numerous students in Full Stack Development and programming
- Recognized for providing quality internship experience and mentorship
- Positive feedback from interns for structured learning and practical exposure

Location Details

Altruisty Innovation operates from Tamil Nadu, India, with a strong digital presence enabling online training and internship delivery across different regions. The company actively engages with learners through its official LinkedIn and Instagram platforms.

LINKEDIN: [https://www.linkedin.com/company/Altruisty Innovation /](https://www.linkedin.com/company/Altruisty%20Innovation/)

INTERNSHIP OBJECTIVES

Primary Objectives

The primary objective of this internship was to gain hands-on experience in Web Development and to understand the complete lifecycle of building web applications. It focused on strengthening knowledge in frontend design, backend development, and database management using modern web technologies.

Secondary Objectives

The secondary objectives included enhancing skills in API integration, debugging, and problem-solving. The internship also focused on improving teamwork, communication skills, and understanding Agile development practices.

Expected Outcomes

The expected outcomes included the successful development of a fully functional web application, practical exposure to integrating frontend and backend systems, and overall improvement in technical and professional skills. The internship aimed to boost confidence and prepare for real-world web development projects.

TOOLS & TECHNOLOGIES USED

Software Used:

During the internship at Altruisty Innovation, various software tools were used to support development, testing, and deployment processes.

- **Visual Studio Code (VS Code):** Used as the primary code editor for writing and managing frontend and backend code efficiently.
- **Git:** Used for version control to track changes, manage branches, and collaborate on project development.
- **GitHub:** Used for repository hosting, code sharing, and maintaining project history.
- **Web Browsers (Google Chrome):** Used for debugging and frontend performance testing.

These tools ensured smooth collaboration and systematic development throughout the internship period.

Programming Languages

The development of WanderWay Travels involved the use of the following programming languages:

- **Python :** Used to build the backend server using the Flask framework, handling API requests, contact form submissions, newsletter subscriptions, and booking inquiries.
- **JavaScript (Frontend):** Used to implement dynamic frontend functionality such as fetching data from the backend APIs, rendering service cards, portfolio projects, and updating page elements interactively.
- **HTML5 & CSS3:** used to design and structure the web interface, including pages like the main landing page and admin dashboard, while also providing responsive layouts, animations, and visual styling. Together, these languages enabled the creation of a complete full-stack web application.

Frameworks & Libraries

The following frameworks and libraries were used in the implementation of the system:

- **Flask (Python):** was used as the backend web framework to create RESTful APIs and manage server-side logic.
- **Flask-CORS** was included to handle cross-origin requests between the frontend and backend. On the frontend, standard JavaScript was used along with custom animation scripts to provide interactive features and smooth user experience.

These technologies enabled efficient development of a dynamic and scalable full stack web application.

Platforms

The following platforms supported development and deployment:

- **GitHub Platform:** For code hosting and collaboration.
- **Cloud-based tools:** Used for testing and application hosting.
- **Web-based APIs (Indeed API):** Integrated for fetching job listings and real-time data.

These platforms helped in managing the complete software lifecycle efficiently.

Hardware Used

The development work was carried out using:

- A Personal Laptop/Desktop System with sufficient RAM and processing power to handle frontend and backend development tasks.
- Stable Internet Connectivity for API integration, cloud access, and version control operations.

No specialized hardware devices were required for this internship.

Development Environment

The internship followed a structured development environment setup, including:

- Installation and configuration of the Python runtime environment for backend development
- Use of pip (Python Package Manager) for installing and managing required libraries
- Setup of a local development server using Flask to run and test the application
- Implementation of RESTful APIs for handling features like contact forms, newsletter subscriptions, and booking inquiries
- Use of an in-memory data storage system instead of a traditional database
- Debugging using browser developer tools

The development workflow followed Agile methodology, ensuring incremental progress and continuous testing.

TRAINING DETAILS

The internship at Altruisty Innovation was structured as a 15-days progressive training program designed to provide comprehensive exposure to Web Development, AI integration, and real-world project implementation. The training was divided into conceptual learning, practical implementation, and deployment phases.

Day 1 - Orientation & Introduction

The internship began with an introduction to the organization, workflow, and Software Development Lifecycle (SDLC). Agile methodology concepts were discussed. An overview of web development and project structure was provided.

Day 2 - Git & GitHub

Participants were introduced to version control using Git and GitHub. Concepts such as repositories, commits, branching, and pushing code were covered. Practical sessions included creating and managing repositories.

Day 3 - HTML Basics

This session focused on HTML5 fundamentals, including tags, elements, forms, tables, and page structure. Participants created basic web pages to understand layout building.

Day 4 -CSS Fundamentals

Training covered CSS3 concepts such as styling, colors, fonts, box model, and layouts. Participants worked on designing responsive and visually appealing web pages.

Day 5 - JavaScript

Participants learned core JavaScript concepts including variables, functions, loops, and conditionals. Basic DOM manipulation and event handling were introduced.

Day 6 -Frontend Development Concepts

Participants explored DOM manipulation, event handling, and dynamic UI updates. Interactive features were implemented using JavaScript.

Day 7 - API Development

This session focused on developing RESTful APIs using Flask. Participants practiced creating API routes for data retrieval and understanding how frontend applications communicate with backend services

Day 8 - React.js Basics

Introduction to React.js including components, JSX, props, and state. Participants created simple reusable UI components.

Day 9 - Backend Development Introduction

Introduction to backend development using Python and Flask. Concepts such as server-side programming and request-response cycle were explained.

Day 10 - Database Integration

This session covered database concepts and integration. Participants learned how to store and retrieve data using databases (such as SQLite or MongoDB) and connect them with backend APIs.

Day 11 - Project Development

Participants began developing the internship project WanderWay Travels, focusing on creating the landing page interface and implementing digital marketing service features.

Day 12 - Feature Implementation

Additional features such as services showcase, portfolio display, and interactive components were implemented. The project interface was improved for better usability.

Day 13 - Testing & Debugging

The application was tested for functionality. Debugging techniques using browser developer tools and console logs were applied. Performance and UI improvements were made.

Day 14 - Project Refinement

The project was refined by improving code structure, optimizing user interface elements, and ensuring smooth communication between frontend and backend modules.

Day 15 - Final Review & Deployment

The final session focused on deploying the web application. Participants learned basic deployment concepts and hosted the project. Final project review and demonstration were conducted.

PROJECT WORK DESCRIPTION

Problem Statement

In today's digital era, the travel and tourism industry heavily relies on online platforms to reach customers and promote travel services. However, many small and emerging travel agencies struggle to present their packages, destinations, and services effectively through a professional website. Without a well-designed online platform, it becomes difficult to attract customers, manage inquiries, and build trust among potential travelers.

To overcome these challenges, WanderWay Travels was developed as a travel portfolio website that provides a modern and interactive platform for showcasing travel destinations and services. The website enables users to explore travel packages, submit booking inquiries, and stay updated through newsletter subscriptions. Additionally, it includes an admin interface to manage customer data efficiently. This solution helps improve user engagement, streamline communication, and establish a strong digital presence for the travel business.

System Architecture

WanderWay Travels follows a client-server architecture consisting of two main components:

Frontend Layer

The frontend is developed using HTML, CSS, and JavaScript. It provides an interactive user interface where visitors can explore services, view portfolio projects, read about the agency, and contact the organization.

Backend Layer

The backend is implemented using Python with the Flask framework, which handles API requests and processes user inputs such as contact forms, newsletter subscriptions, and booking inquiries.

Work Flow

The development of WanderWay Travels followed a structured and modular workflow. Initially, project requirements and website layout were planned to define the structure for displaying travel services, destinations, and user interaction features. The frontend interface was then developed using HTML, CSS, and JavaScript to create a responsive and interactive user experience.

Next, the backend server was built using Flask to handle API requests and manage form submissions. APIs were created for contact forms, newsletter subscriptions, and booking inquiries. After developing both frontend and backend, they were integrated using JavaScript fetch requests to enable communication between the client and server.

Finally, the complete system was tested to ensure smooth navigation, proper data handling, and successful form submissions through the website.

Methodology

The project followed a structured development methodology consisting of several stages.

Steps followed:

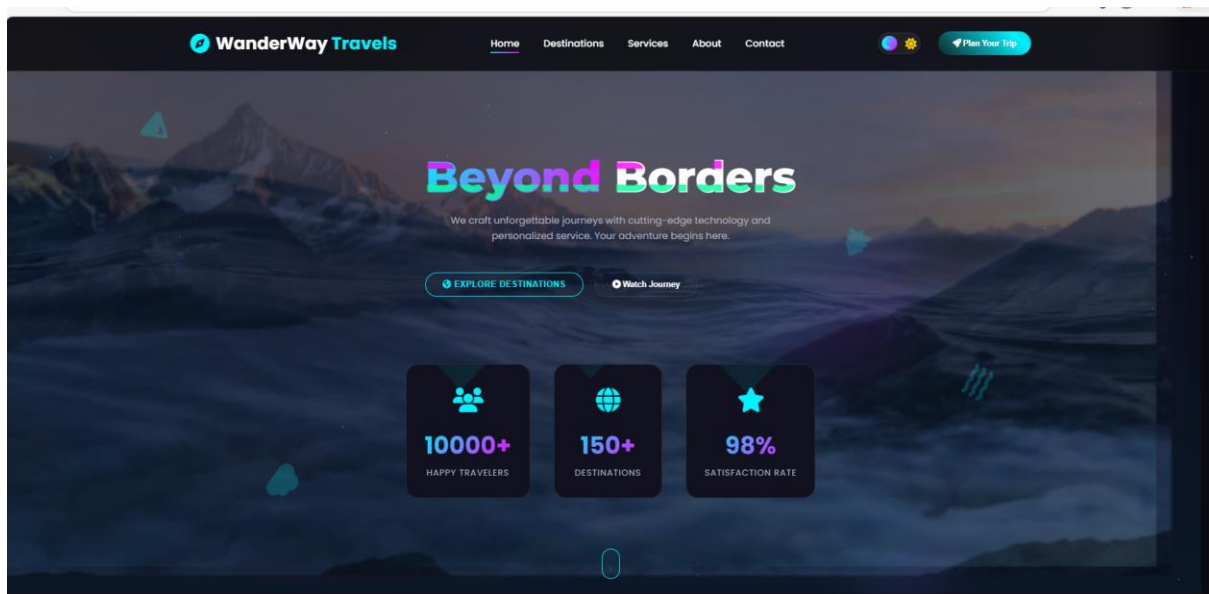

- Requirement analysis
- UI design and layout planning
- Frontend development using HTML, CSS, and JavaScript
- Backend API development using Python (Flask)
- Data handling using in-memory storage
- Frontend–backend integration
- Testing and debugging
- Final deployment and optimization.

The modular development approach ensured better organization, easier debugging, and improved maintainability of the web application.

Modules Developed

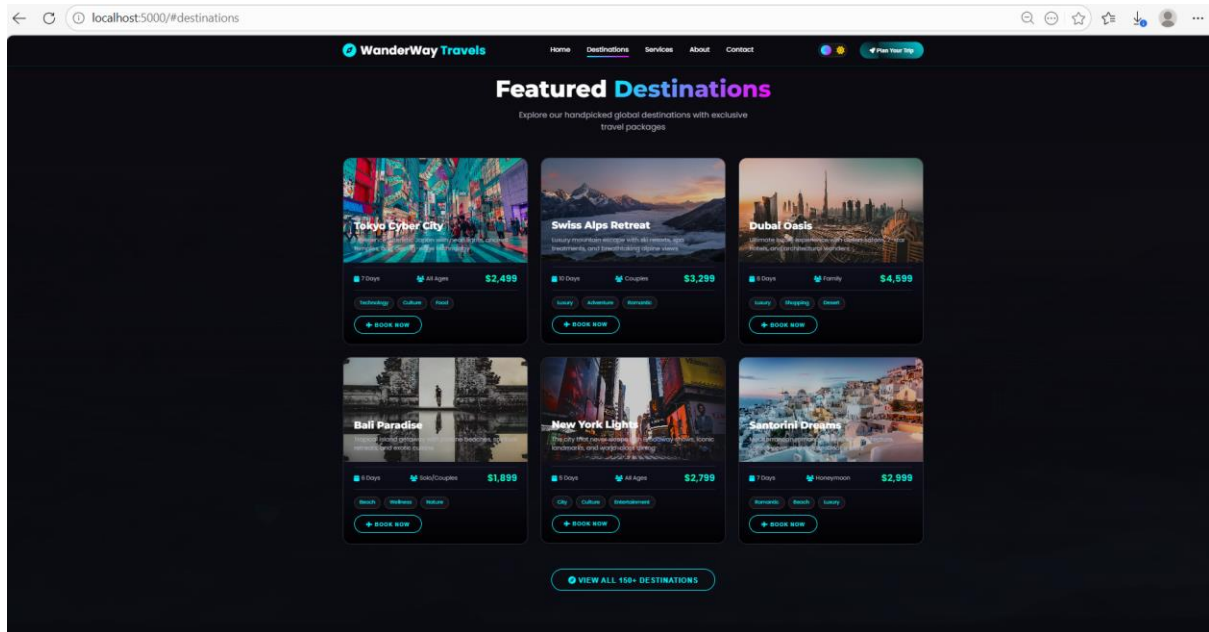

1) Home Module

This is the main landing page of the website. It provides an overview of the travel services, highlights key features, and attracts users with visuals and animations. It acts as the entry point for navigation to other sections.

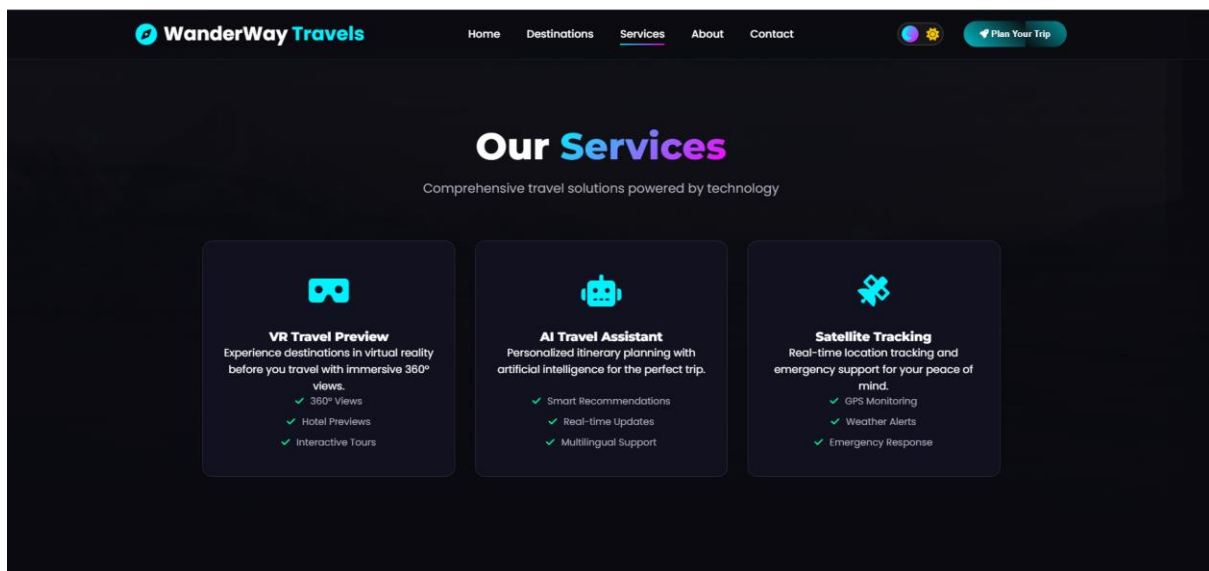

2) Destinations / Services Module

This module showcases different travel destinations and services offered by the platform. Users can explore available travel options, packages, and related information.

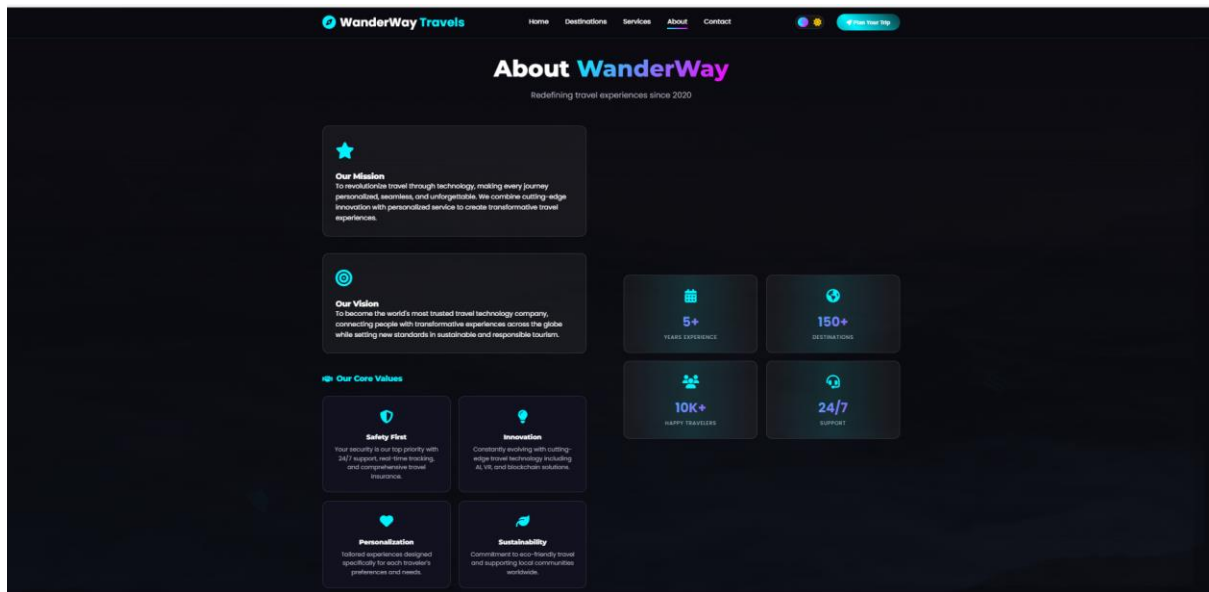

3) Booking Inquiry Module

This module allows users to submit travel booking requests. Users can enter details such as name, destination, travel date, and number of travelers. The data is sent to the backend and stored for processing.

4) About

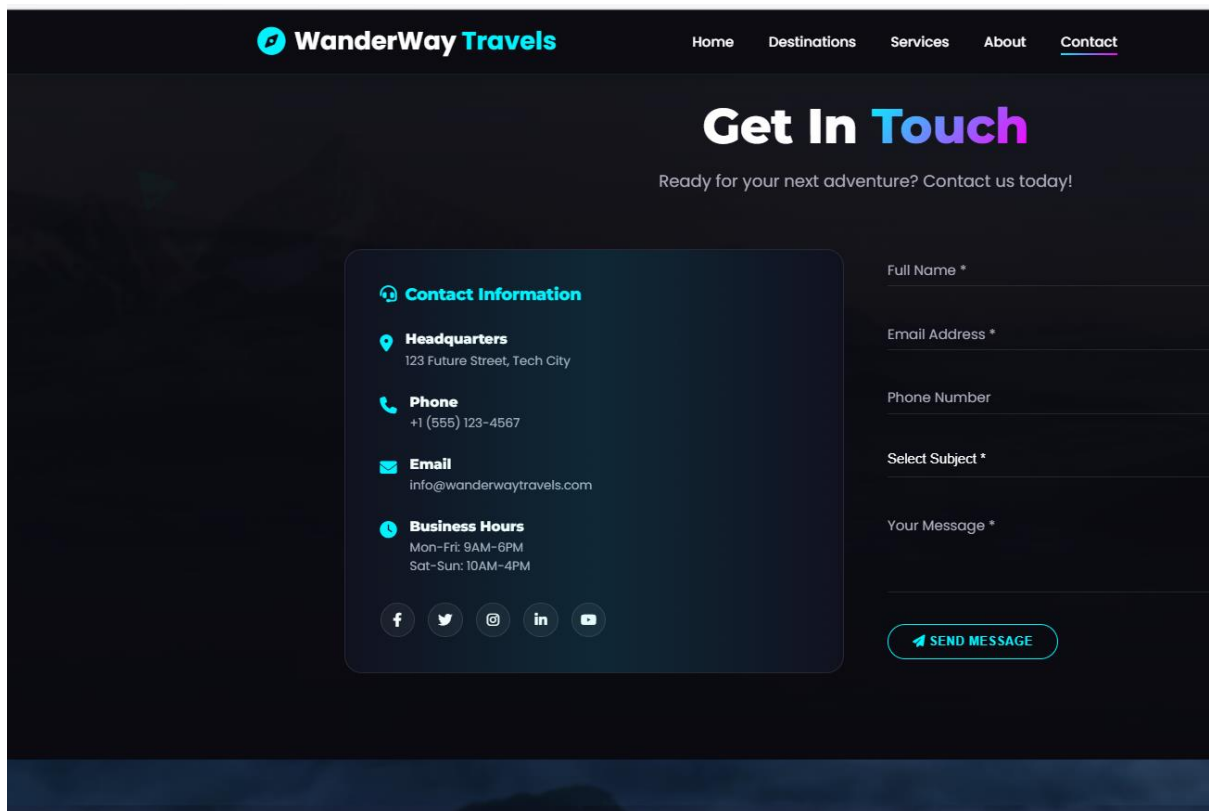

It highlights the key features of the platform, such as exploring destinations, booking travel inquiries, and staying updated through newsletters.

5) Contact Module

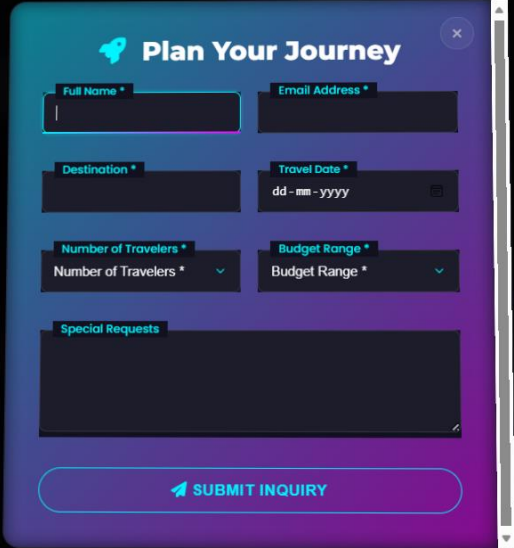

Allows users to send inquiries through a contact form.

The submitted information is processed by the backend server and stored database.

6) Trip Booking Module

The users can book the trip through this module.

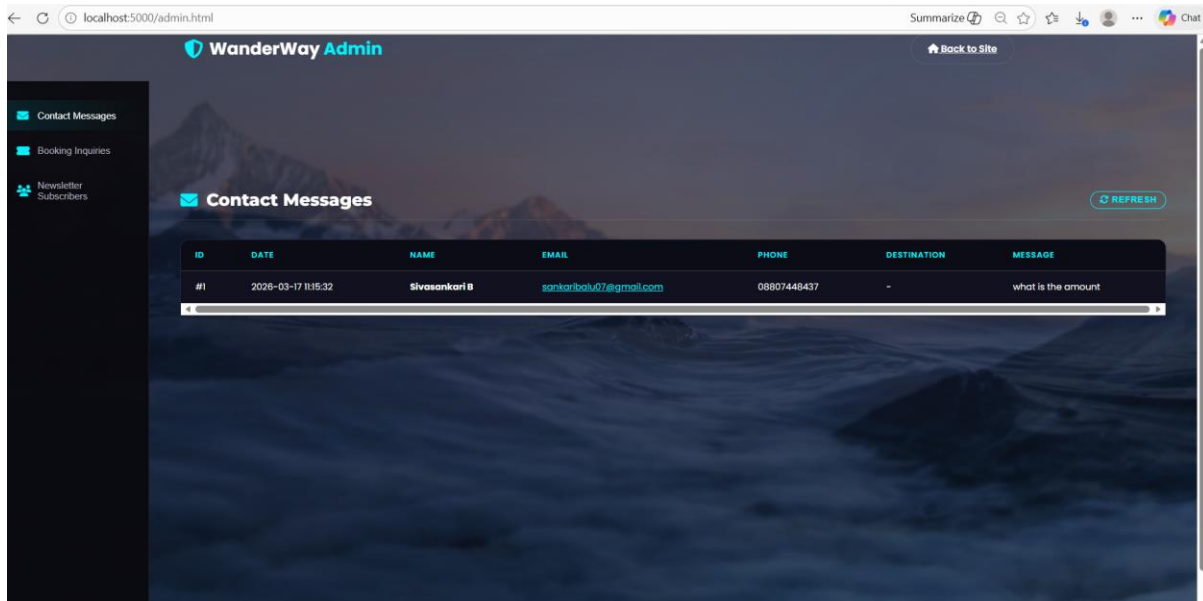

The image shows a 'Plan Your Journey' form with a blue and purple gradient background. The form includes the following fields:

- Full Name ***: A text input field.
- Email Address ***: A text input field.
- Destination ***: A text input field.
- Travel Date ***: A date picker field showing 'dd - mm - yyyy'.
- Number of Travelers ***: A dropdown menu.
- Budget Range ***: A dropdown menu.
- Special Requests**: A large text area for additional information.

At the bottom of the form is a blue button labeled **SUBMIT INQUIRY** with a right-pointing arrow icon.

7) Admin Module

Provides an admin dashboard where administrators can view and manage messages submitted through the contact form. This module retrieves stored messages from the database and displays them in a structured format for the administrator.

Contact Form

When a user submits the contact form, the system processes the data and stores it in the database.

Steps involved:

- Capture user input including name, email, phone, destination, and message.
- Validate the input fields to ensure required fields are not empty.
- Perform basic email validation.
- Send the form data to the backend using a POST API request.
- The Flask backend receives and processes the request.
- Store the contact data in in-memory storage.
- Return a success response to the frontend.
- Display a confirmation message to the user.

Booking Inquiry Processing Algorithm

This algorithm handles travel booking requests submitted by users.

Steps involved:

- Capture user details such as full name, email, destination, travel date, and number of travelers.
- Validate required input fields.
- Send booking data to the backend via API request.
- Backend processes and stores booking details.
- Generate a unique booking ID.
- Return confirmation response to the frontend.
- Display booking success message.

Admin Data Retrieval Algorithm

This logic allows the admin to view stored user data such as contacts, bookings, and subscribers.

Steps involved:

- Admin opens the admin dashboard page.
- The frontend sends a request to the backend API.
- The backend retrieves stored data from memory.
- The data is returned in JSON format.
- The admin interface displays the data in tables.

This ensures easy monitoring and management of user interactions.

Frontend Implementation

The frontend interface is developed using HTML, CSS, and JavaScript.

Main frontend responsibilities include:

- Displaying website pages such as Home, About, Destinations, and Contact
- Providing interactive UI with animations and responsive design
- Handling user interactions and navigation
- Managing contact, booking, and newsletter form submissions

- Displaying admin dashboard data dynamically
- The modular structure improves usability and maintainability.

API Integration

The system uses REST API endpoints built with Flask to enable communication between frontend and backend.

Main API endpoints include:

- **POST /api/contact**

Handles contact form submissions and stores messages in the database.

- **POST /api/newsletter**

Stores user email subscriptions

- **GET /api/admin/contacts**

Retrieves contact messages for admin

- **GET /api/admin/subscribers**

Retrieves newsletter subscribers

These APIs ensure smooth data flow between client and server.

Testing & Validation

Testing was conducted to ensure that all features of WanderWay Travel function correctly.

Functional Testing

The following functionalities were tested:

- Navigation between website sections.
- Contact form submission and validation.
- Booking inquiry functionality.

- Newsletter subscription.
- Admin dashboard data display.
- API communication between frontend and backend.

User Interface Testing

The user interface was tested to ensure that:

- All pages display correctly.
- Navigation menu functions smoothly.
- Admin dashboard displays messages properly.
- Responsive design works across mobile, tablet, and desktop devices.

Error Handling Testing

Various scenarios were tested to ensure system stability.

Examples include:

- Invalid contact form inputs
- Empty message submissions
- API request failures
- Incorrect admin page access

The system successfully handled these situations without affecting application functionality.

ROLES & RESPONSIBILITIES

Daily Activities

- Attended regular mentor discussions and review sessions
- Practiced frontend development using HTML, CSS, and JavaScript
- Worked on improving UI design, animations, and responsive layout
- Developed and tested API integration using Flask backend
- Debugged frontend and backend errors using browser developer tools and console logs
- Documented daily progress and updated implementation tasks
- Researched solutions for issues related to API communication and data handling

Assigned Tasks

- Designed and developed the complete frontend interface using HTML, CSS, and JavaScript
- Implemented contact form, booking inquiry form, and newsletter subscription features
- Developed backend APIs using Python (Flask) for handling user data
- Integrated frontend with backend using fetch API for real-time communication
- Created admin dashboard to display contacts, bookings, and subscribers
- Implemented proper input validation and error handling for forms
- Improved overall responsiveness and user experience across devices

Each assigned task contributed to building a functional and user-friendly travel web application.

Team Interaction

- Collaborated with fellow interns to discuss project features and solution
- Participated in knowledge-sharing sessions on frontend and backend development

- Received continuous guidance and technical support from the mentor
- Incorporated feedback during review sessions to improve project quality

Team interaction enhanced communication skills and encouraged collaborative problem-solving.

Reporting Structure

- Reported project progress regularly to the assigned mentor
- Submitted updates on completed modules such as Home, Booking, and Contact features
- Demonstrated working functionalities like form submissions and admin dashboard
- Incorporated mentor suggestions before final project submission
- The structured reporting process ensured timely completion and improved project quality

SKILLS ACQUIRED

During the 15-days internship at Altruisty Innovation, I gained valuable technical knowledge and professional skills through hands-on project development and real-time learning.

Technical Skills

- Proficiency in HTML, CSS, and JavaScript for building dynamic and responsive user interfaces.
- Understanding of API Integration for fetching and handling real-time service and portfolio data.
- Knowledge of Python and Flask for backend development.
- Experience in handling form data such as contact, booking, and subscriptions
- Practical exposure to debugging and testing frontend and backend components
- Understanding of full-stack development concepts
- Improved knowledge of UI/UX design and responsive layouts

These technical skills strengthened my foundation in full stack development and modern web technologies.

Soft Skills

- Improved communication through mentor discussions and presentations
- Enhanced problem-solving skills while debugging technical issues
- Developed time management skills to complete tasks within deadlines
- Strengthened teamwork through collaboration with peers
- Increased confidence in handling real-time development challenges

Industry Exposure

- Gained practical understanding of the Software Development Lifecycle (SDLC) through the development of the WanderWay travel web application.
- Experienced working in a structured internship environment.
- Understood the importance of clean coding and documentation.
- Learned how real-world projects like WanderWay Travel are developed, reviewed, and improved iteratively.
- Exposure to industry practices such as Agile methodology, modular development, and version control.

CHALLENGES FACED & SOLUTIONS

Technical Challenges

Integrating frontend forms with backend APIs and handling dynamic data was initially challenging. Managing API errors and ensuring proper data validation required careful debugging.

Solution:

By testing APIs step-by-step, using console debugging, and understanding Flask routing, these issues were resolved effectively.

Time Management

Balancing internship work with academic responsibilities required proper planning.

Solution:

Tasks were divided into smaller modules such as contact form, booking system, and admin dashboard, ensuring timely completion

Team Coordination

Communicating ideas and clarifying doubts during development required coordination.

Solution:

Regular discussions and mentor feedback improved teamwork and workflow.

Problem-Solving Approaches

Technical issues were resolved by analyzing errors systematically, using console debugging, and referring to official documentation. Seeking mentor guidance when necessary helped in quick resolution.

LEARNING OUTCOMES

The 15-days internship at Altruisty Innovation provided valuable technical knowledge and real-time development experience.

Knowledge Gained

- Strong understanding of HTML, CSS, and JavaScript fundamentals and multi-page website architecture.
- Knowledge of API integration and handling real-time service and portfolio data.
- Understanding of backend development using Flask
- Improved debugging and testing techniques

Practical Exposure

- Hands-on experience in developing the WanderWay Travels Website.
- Real-time implementation of contact, booking, and newsletter features
- Experience in integrating frontend with backend APIs
- Understanding of complete project development lifecycle

Professional Development

- Improved communication and teamwork skills through regular mentor interactions and intern collaborations.
- Enhanced time management and responsibility handling while managing multiple website modules.
- Increased confidence in working on real-world web projects.
- Better adaptability to a professional work environment and iterative development process.

CONCLUSION

Summary of Internship Experience

The internship provided valuable hands-on experience in full-stack web development using HTML, CSS, JavaScript, and Python (Flask). Through the development of the WanderWay Travels website, I gained practical exposure to API integration, form handling, and responsive web design. The experience helped bridge the gap between theoretical knowledge and real-world application development.

Overall Contribution

During the internship, I contributed to the design and development of WanderWay Travels, a travel web application. I developed the frontend interface and implemented backend APIs for handling contact forms, booking inquiries, and newsletter subscriptions. I also created an admin dashboard to manage user data and ensured smooth communication between frontend and backend systems. The project demonstrates practical implementation of full-stack development concepts.

Career Impact

This internship significantly strengthened my foundation in web development and improved my confidence in handling real-world projects. It enhanced my technical, problem-solving, and communication skills. The experience has motivated me to further explore advanced technologies and pursue a career in full-stack web development.
